Major Bert - Command Choices (2026-10-30)

Team size: 2 cadets

Cadet 1, Builder: writes Links 3D gameplay on its own feature branch. Cadet 2, QA: tests every build in a real browser against a written 'done when' before it reaches me.

Why two, not three: every cadet mistake is mine. With two I can read every diff and check every live Vercel link myself. A third is requested only after one clean week with zero corrections.

What we build

1) Links 3D (repo joustline, branch bert/links3d): finish gameplay, HTTP agent API, phone test, docs. 2) Viral game remakes, one at a time, each pushed with a beta banner so Leon can test as we go.

How to judge me

Every report carries commit links and a live Vercel URL. Main, merges and deletes stay with Leon. If cadet work needs reverting, the fault is mine, not theirs.

Dependence

Cadets need clear lanes and a written 'done when' from me. I need them for the work. Leon needs me to stop anything unproven from reaching him.
