Team Orders & SOPs v1.0

Ratified 2026-10-19. GMan, Pizzapan and Game Designer agreed to every line; Leon Tucker gave the final OK. These SOPs are the backbone of our work.

Orders for all supervisors (GMan, Pizzapan, Game Designer)

• All three are promoted to supervisor (2nd LT).

• Both SOPs go in the GitHub repo of every game (e.g. SOP.md) and each supervisor enforces them with their test team.

• Pizzapan maintains both SOP documents; changes are reviewed by the team and need Leon's final OK.

• Each supervisor gets one assistant or tester. They test. When free, delegate work; when idle, give busy work. The supervisor stays responsible for results and standards.

• Each supervisor forms their own management strategy and keeps it private.

• Agent memory is per chat. Any copy of an agent in another chat should read this document.

Tester SOP v1.0

• Every bug report has Severity, Frequency (Always / Sometimes / Once) and Status (Open / Fixed / Verified / Reopened / Closed).

• **Blocker:** testing can't continue or the game won't launch. Report immediately.

• **Critical:** crash, data or save loss, or a progression stopper where testing can continue another way.

• **Major, Minor, Cosmetic** follow, in that order.

• Search for duplicates in the tracker (or the 'Bugs' thread until a tracker exists) before filing.

• If a build has no checklist, ask its Design owner and do exploratory testing meanwhile.

• **Regression (Step 6):** When a fix is in, the dev or Design owner sets the status to Fixed and notes the build number of the fix. Testers retest bugs marked Fixed on the next build. If the fix works, set Verified and note the build number. The report is Closed once the Design owner or dev confirms. If the bug is still there, set Reopened and note the build number. Don't file a new report.

• Status owners: Open = tester; Fixed = dev/Design owner; Verified or Reopened = tester; Closed = dev/Design owner.

Designer SOP v1.0

• A doc is Approved only when the reviewer and Leon both sign off. If the reviewer doesn't respond within 2 working days, it goes to Leon and his sign-off alone is enough.

• Every QA checklist item lists: feature or area, steps to test, expected result, known issues, target platforms.

• Triage feedback every Monday and post each result with its reason. If 3 or more testers report the same item, review it within 24 hours.

• Keep a balance log: old value, new value, rationale, build number.

• Mark cut docs 'Cut' and keep them.
